

SMART PARCEL LOCKERS

MODERN EXPO

Parcel Lockers

In search of improving the supply chain, we have developed a solutions system that makes delivery more personalized, convenient and faster.

LOKO family is a 24/7 self-service post office that consists of three product types, which are designed for a certain business model and covers specific needs of the end customer.

This new generation of parcel terminals by Modern Expo is the optimal solution for the organization of the last-mile delivery.

Integration of digital technologies, high quality storage (with the ability to control the temperature regime) and convenience of use simplify last-mile logistics.

Different cell configurations and a wide set of accessories meet the needs of both logistics companies and retailers.

- > CO₂ emissions reduction by more than 50%
- > 24 / 7 / 365 lockers chain – close to every client
- > Effective work of couriers
- > Social distancing
- > Ready to use solution

- > Customizable number of columns
- > Cell variability
- > Illumination of each column
- > CCTV
- > Alarm for unauthorized opening
- > Software
- > Api optimization
- > Air quality sensor
- > Intelligent design
- > Integration of Fresh column in one line with dry columns
- > Autonomous locker

Loko Family

Loko family consists of 5 different types of parcel lockers with a big range of accessories to create your ecosystem, integrated into urban infrastructure.

- Outdoor and indoor usage
- Screen or BLE operation
- Loko Fresh in the same line with Loko Logis
- Easy scalability of the parcel locker
- Customizing of the columns
- Open API
- Inclusiveness
- Energy efficiency
- Wide range of accessories
- Autonomous work

Covers all segments of the market (postal operators, couriers, e-commerce, retailers).

Adaptation of software depending on client's needs.

Logis

This new generation of parcel lockers by Modern Expo is the optimal solution for the organization of the last-mile delivery.

Integration of digital technologies, high-quality storage (with the ability to control the temperature regime) and the convenience of use, simplify the last mile logistics.

Different cell configurations and wide set of accessories meet the needs of both logistics companies and retailers.

Local

This elegant device will become an indispensable functional element of private houses, residential areas and country houses, bringing delivery service at the last mile to a fundamentally new level.

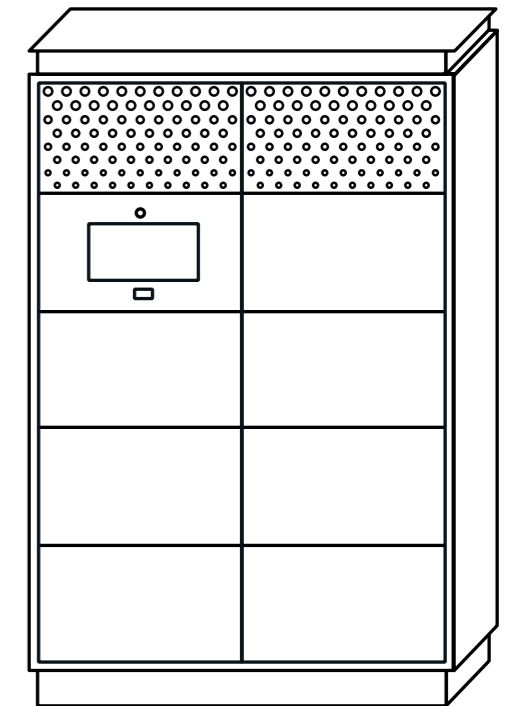

Fresh

«FRESH» module is unique development of Modern Expo and an excellent instrument for improving brands' omnichannel communication with their clients.

This method of contactless delivery is the best solution not only for logistics operators but also for restaurants, cafés, local producers, and grocery stores.

TEMPERATURE MODES

cooling	M1(-1...+5°C) M2(-1...+7°C)
freezing	L1(-15...-18°C) L2(-12...-18°C)

Eco Logis

Taking into consideration that logistics and delivery services directly affect energy consumption, our innovations reduce negative impacts on the environment.

We've developed solutions that work autonomously, using battery for power. Eco Logis parcel lockers are based on BLE technology, which ensures the possibility to reduce energy intake significantly and eliminate high energy-consuming components.

Common

Loko Common is developed specifically for installation in the entrance halls of residential and office buildings. Installing this device in proximity to the end customer is the way to provide convenience, seamless experience and perfect service.

Software

Software for parcel lockers allows managing the entire lockers network in real-time. Namely, tracking the status of each parcel, monitoring the number of busy and free cells, and receiving all information about the machine.

Moreover, we create applications for couriers and final customers, that ensures maximum parcels delivery speed and provide a seamless customer experience while using parcel locker.

- > Development and integration
- > Adaptive to other platforms
- > Real-time tracking

- > Careful tracking of each parcel locker
- > Service network 24/7
- > Unique AI-based security system
- > Video control of each point

Network

We provide our customers with integrated solutions for effortless parcel lockers network creation.

We develop software for managing the entire parcel lockers network in realtime and are experienced in adapting the machines to our client's software.

Energy Efficiency

We are constantly working to reduce the carbon footprint and develop our products less energy-consuming. Our solutions are technological and reliable, so you will not spend extra time and energy to maintain their viability.

We already offer products that work without a network connection, but using natural renewable resources.

- > Autonomous solutions
- > Energy-efficient technologies
- > Devices powered by solar energy

- > We use only industrial hardware components. Our products are tested in a certified laboratory to guarantee the compatibility of components and product performance in different climate conditions (-25°C — +40°C)
- > The complex solution is tested in harsh weather conditions to confirm the IP-protection
- > All main components are installed in separate blocks, helping a technician to detect a problem very quickly
- > Usage of the automotive approach allows to remove each separate broken block and change it with the new one, saving time and cost for service and maintenance
- > Plug&play solution guarantees the quick installation of the product

BrainBox

How it works?

When it comes to service and maintenance there can be a lot of issues which are very complicated to detect on the location. It takes a lot of time for technician. That's why we are one step forward how to solve this issue very fast.

When on the location parcel locker is not working, it's very easy to replace the whole smartbox with the new one (technicians have them in stock). You just unplug the cables then you connect the new smartbox and start the APM — so business is working.

After that, the technician can work with the damaged smartbox anywhere he wants, avoiding bad weather conditions. Because very frequently it's complicated to work with IT-components during rain.

After detecting the problem, technician replaces damaged component and this smartbox is ready to use.

Pick up

How does delivery to the Modern Expo parcel terminals work, and why is it convenient?

Let's imagine the situation: the end customer orders something online and chooses the nearest parcel terminal as the delivery point.

Then, the parcel is transported by the logistics operator and issued to the courier along with the QR code, which he uses for the delivery directly to the parcel terminal.

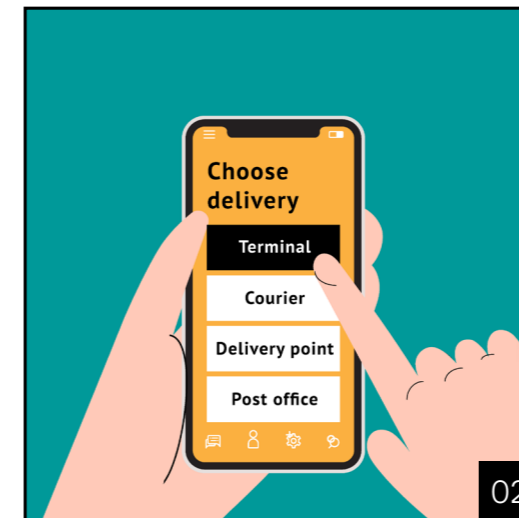

Immediately after this, the end customer receives a notification with a QR code or a password that informs that the order has arrived at the destination.

So, that's it! It remains only to pick up the parcel by scanning the QR code or entering the password on the touchscreen.

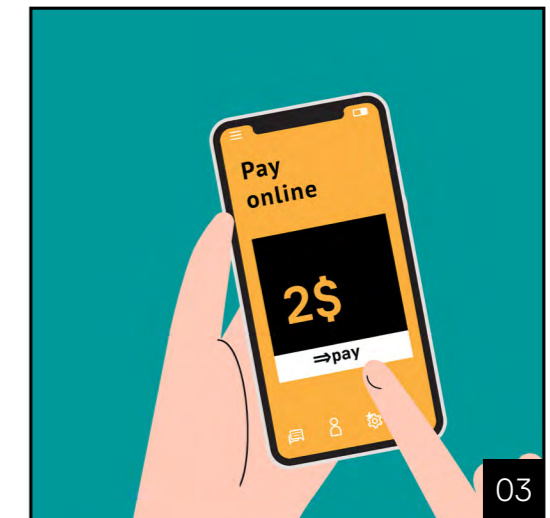

Using our parcel locker is simple, understandable to everyone, and highly secured. Customers can pick up parcels any time of the day, without queues and unnecessary hassles, and with no need to adjust to the schedule of logistic operators or courier services.

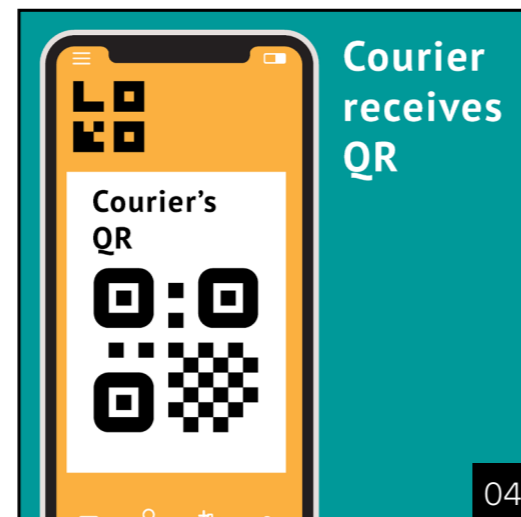

Order online

Choose delivery to parcel locker

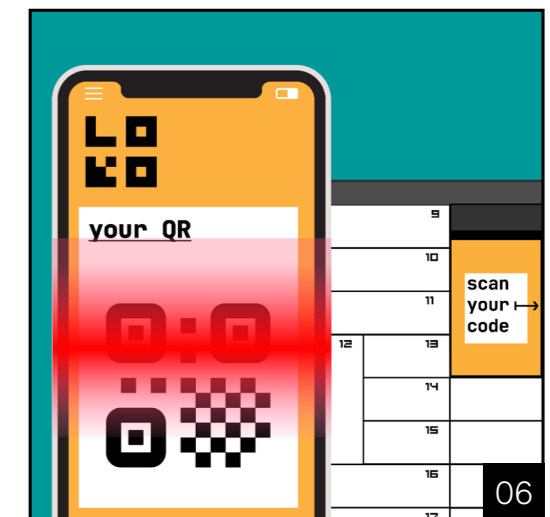

Pay online

Courier receives unique QR-code for your parcel and address of the locker

Courier puts your parcel into the cell

The final customer receives unique QR code scans it, and takes the parcel from the locker

Click & Collect complex solution by Modern Expo

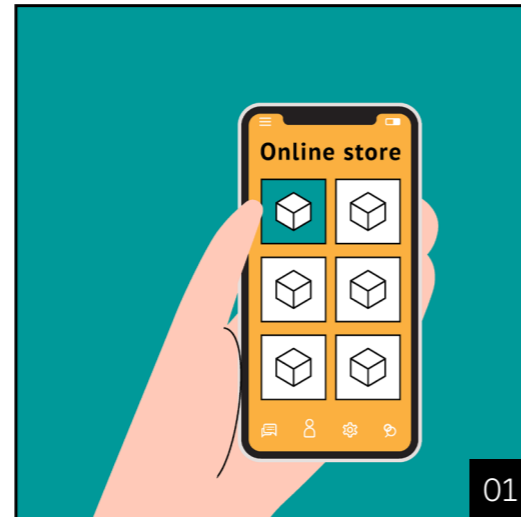

What is Click & Collect in retail?

Click & collect simply means buy online, pick up in-store or near store. It's become a popular retail strategy that allows customers to have the best of both worlds: online shopping and fast pick up.

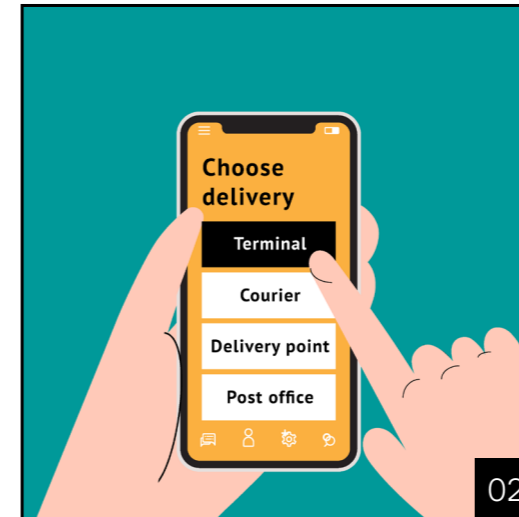

That way, customers don't have to pay for shipping, wait a long time for their items to be delivered, and deal with delivery errors that often arise with order fulfillment. They can shop from the comfort of their own homes, purchase the item online, and go to the store when it is time to see the item is ready for pickup.

Click & Collect complex solution by Modern Expo includes:

- Elastic online-store
- Pickers' app
- Loko LOGIS or Loko FRESH
- Control dashboard

Order online

Choose delivery to parcel locker

Pay online

The final customer receives a unique QR code scans it

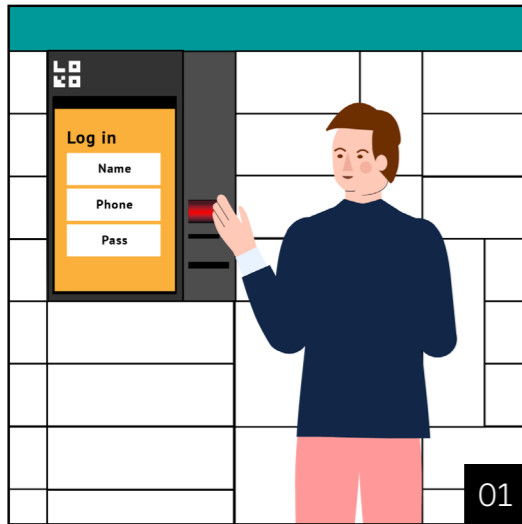

Pick up your parcel 24/7

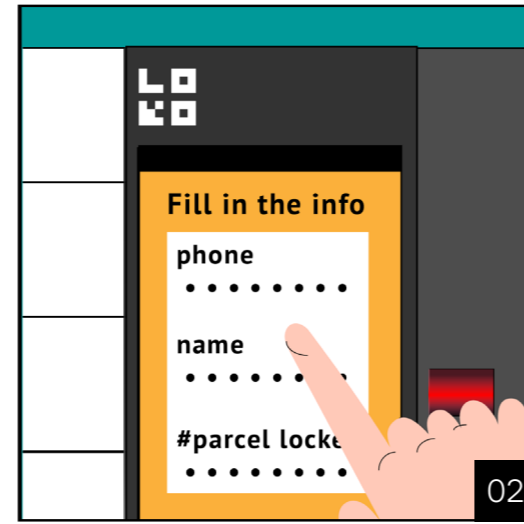

How it works for retailer?

- Registration of new company on our online platform
- Authorizing in personal cabinet
- Setting up the company and the profile
- Adding products to the online platform
- Managing and monitoring statistics and workflows
- Gaining revenues

Drop off

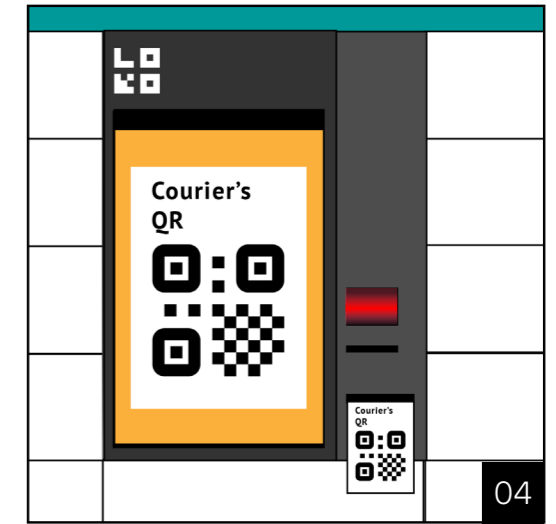

Log in near the parcel locker using monitor

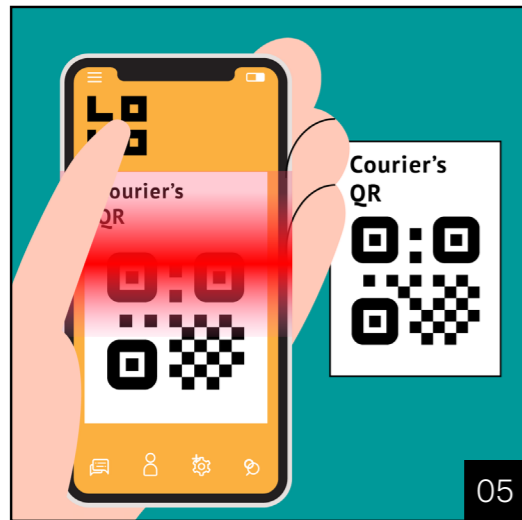

Filling in the information about recipient and number of locker where to deliver the parcel

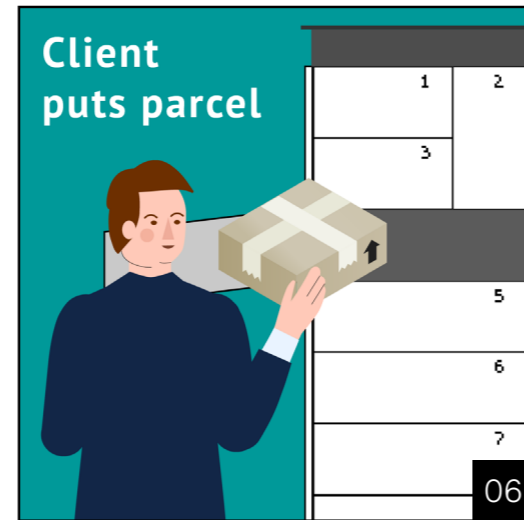

Choosing cell size in accordance to the size of the parcel

Unique QR-code generates automatically from the printer on the locker. Stick this label to your parcel

Scan this printed QR code

Client puts parcel into the cell

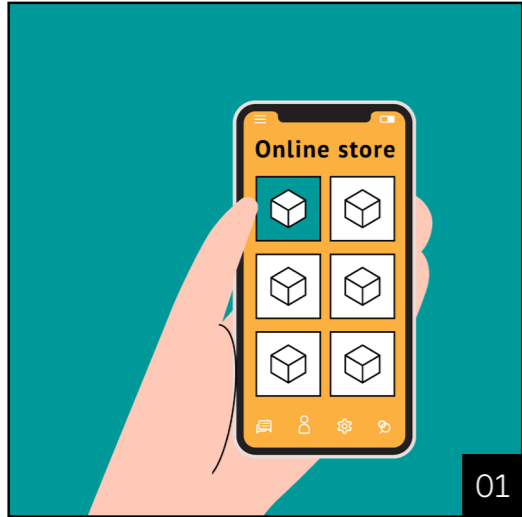

Courier receives unique QR code for your parcel and address of the locker

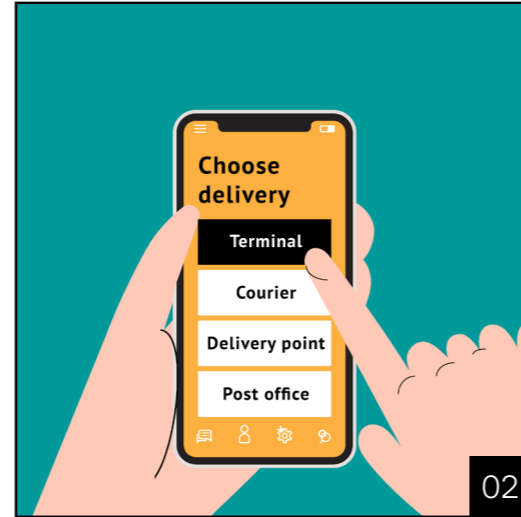

Courier picks up the parcel

Pick up in BLE Terminal

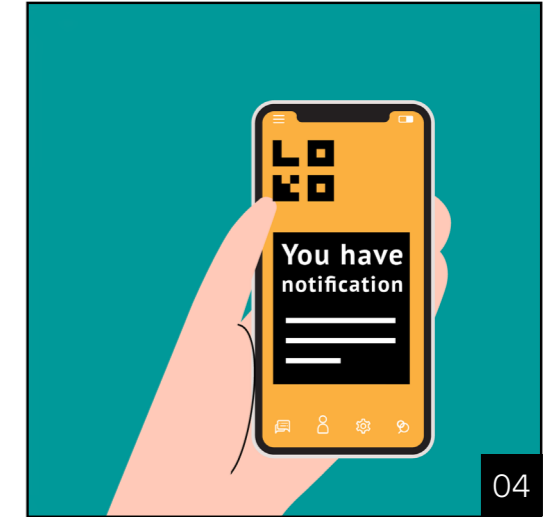

Order online

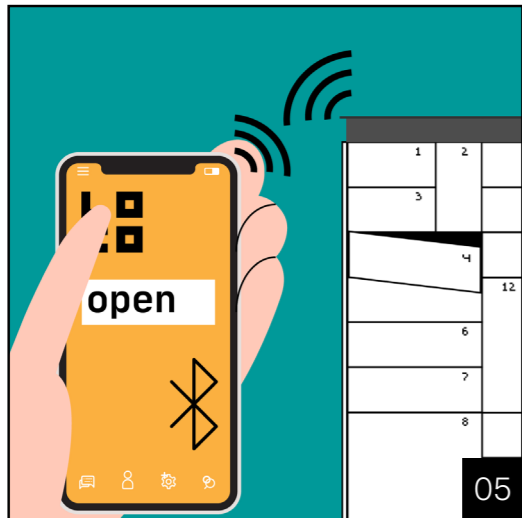

Choose delivery to parcel locker

Pay online

Courier receives notification in courier application

Courier connects via BLE technology on a smartphone and opens a cell using a courier application and puts a parcel into the cell

The final customer receives a notification that the parcel is already in the locker connects via BLE-technology and opens a cell using the client's application

Type Fresh
4 cells

Options of sets for Loko FRESH

How to create sets:

The terminal column is mandatory (cooling or ambient) – 1 piece for 1 locker, other columns are ordered according to the clients' requests.

Options of sets for Loko LOGIS + Loko FRESH

How to create sets:

When there's a combination of Loko LOGIS and Loko FRESH – everything is operated from LOGIS terminal column (standard or PRO), so it's necessary to order only cooling, freezing or ambient columns of Loko FRESH.

Power supply and decorative side panels are mandatory for ordering.

ECO LOGIS

- › BLE-technology
- › Lowering operating costs
- › Fast installation and connection to the network
- › Operating with Mobile Apps
- › Contactless
- › Lifespan of battery – 2 years

ECO LOGIS – compact outdoor parcel locker. Screenless autonomous solution. This parcel locker provides more opportunities to install terminals where connection to the network is not possible.

Modules

Eco Logis parcel locker always consists of 2 columns (in the same cell configurations as Loko LOGIS).

- 1 Canopy, base and side panels in one set
- 2 Column 1
- 3 Column 2

Dimensions

All dimensions are in millimeters

* With side panels

Options of sets for Loko ECOLOGIS

How to create sets:

Eco LOGIS is a parcel locker with 2 columns.

There's no terminal column with screen, because the workflow goes in application on courier's or client's smartphone.

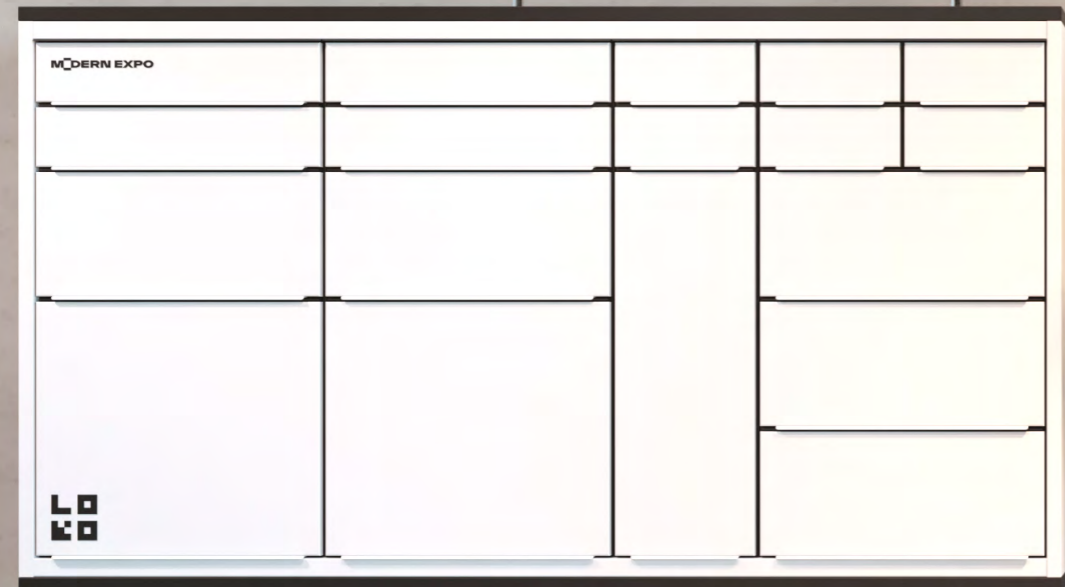

Cell configurations of the columns are the same to Loko LOGIS.

COMMON

COMMON – compact indoor parcel locker. For apartment buildings, indoor version. Working on BLE-technology.

- > Closer to the client
- > Integral part of the block
- > Around the clock
- > Energy efficiency

Modules

Loko COMMON exists only in one configuration for 18 cells

- Full set in one code
- Fixation to the floor
- Fixation to the wall

Dimensions

* All dimensions are in millimeters

LOCAL (CONCEPT)

LOCAL — personal parcel terminals, which provide fundamentally new delivery service at the last mile. For private houses.

Modules

- 1 Rechargeable battery
- 2 Metal body
- 3 Concrete box

Dimensions

* All dimensions are in millimeters

CASES

Allegro

Poland

> 1 000 lockers

Our parcel terminals have become a new modern possibility of the last mile delivery service that also embodies important social and public functions. Each parcel is decorated with 10 sq.m. plant walls, which cover either the front side or space around the locker.

Thus, Modern Expo's parcel terminals have become attractive elements of the urban environment, successfully integrating into its infrastructure. Furthermore, they transform public spaces into cozy green islets that purify the air. By the way, it is easy to confirm terminals' usefulness because each of them is equipped with an air quality sensor.

Sameday

Romania

> 1 250 lockers

Parcel terminals by Modern Expo for Sameday, which is the largest locker network in Romania.

Sameday, in turn, is a partner of the largest Romanian online retailer — eMAG company. One of the latest of their innovations was the development of their own parcel terminals network called EASYBOX.

The common portfolio of Modern Expo and Sameday includes already more than 1000 cases of the parcel terminals, which have already become integral parts of the European cities' infrastructure.
